

# Outpass

## About the project

Outpass is an android application to manage outpass system of hostels. Here it gives the facility to the students , to request for an outpass in a single click. Students don't need to keep any paper documents. Students can request for the outpass and administrative people can accept or reject the request. Security people can verify the allowed outpasses. It is a simple and much better system for outpass management.

## User stories and requirements

1. Students, administrative people and security needs the login to the application.
2. Students can create a profile with their basic information.
3. Request for the outpass with date and time.
4. Administrative people can see all outpass requests and they can approve or reject it.
5. In security login they can see approved outpasses and can identify the students.

## Users
